

# Where development happens

**Docker Hub** is a platform to discover, distribute, store, and serve cloud-native components, including container images.

As a source of trusted content to build on top of or use as-is in production, Hub is the easiest way to create, manage, and deliver your team's container applications.

## What is Docker Hub?

**Docker Hub** is a critical resource for developers and organizations working with Docker, simplifying the process of building, sharing, and deploying containerized applications.

## Overview

-  **Secure and trusted marketplace**
-  **Collaboration tool to distribute code publicly or privately**
-  **Largest and most widely used repository of container images**

## How Hub Solves Common Developer Challenges

### Trusted Content

Docker Official Images are verified, ensuring that they come from trusted sources and have been rigorously validated for security and integrity.

### Secure Scalable Storage

Reliable and secure solution for storing and managing container images.

### Package Applications & Dependencies

Bundle your applications with all their necessary dependencies, ensuring consistent and reliable deployment across any environment.

### Application Portability

Move and deploy your applications across different environments without worrying about compatibility issues.

## Learn More

Get started with Docker Hub.
